PREFACE

According to *The Random House Dictionary of the English Language*, unabridged version (New York, 1966, page 549), a *Flying Saucer* is: "any of various disk-shaped objects allegedly seen flying at high speeds and altitudes, often with extreme changes in speed and direction, and generally presumed to be from outer space."

The first officially-reported sighting of a *Flying Saucer* was made on June 24, 1947, by Mr. Kenneth Arnold of Seattle, Washington. Mr. Arnold stated that he saw the objects while piloting his airplane near Mount Rainier, Washington. Shortly thereafter reports began to mushroom, and sightings were reported throughout the world. Actually, reports of sightings, official and unofficial, including many originating in the United States, have a long series of precedents in world history, anteceding the atom and hydrogen-bomb explosions which began in 1945. In the United States, Charles Fort (see Charles Fort: *The books of Charles Fort*, with an introduction by Tiffany Thayer; published for the Fortean Society by H. Holt and Company, New York, 1941, 1125 pages) wrote about creatures from other planets who traveled through space to Earth. His followers formed the Fortean Society during the early part of the twentieth century when most of his books appeared.

The study of UFO's and its allied field, *Life on Other Planets*, engrossed the early astronomers, including Copernicus and Tycho Brahe. Later scientists, such as Kepler and Arrhenius, wrote about the latter topic as an aspect of astronomy. Included herein are the titles of their books as well as the books and articles of present-day astronomers and specialists in the new science of Exobiology (the study of existence of life outside of our planet).

The works of ancient and modern philosophers who were concerned with this matter, as well as recent articles on Exobiology and space travel as these are related to religious thought, are included in the bibliography on *Life on Other Planets*.

Both bibliographies, *Flying Saucers*, and *Life on Other Planets*, contain the names of authors and titles, names of publishers, and places, dates of publication, and prices of books, pamphlets, government reports and the proceedings of conferences all in one section, with magazine articles in a separate section. Items in English comprise a majority, although there are works listed in Arabic, French, German, Italian, Latin, Portuguese, Russian, Spanish and Swedish. At the end of the bibliography section is a listing of the names and addresses of publishers. Publishers not listed here are no longer in business. It is important to note that prices of books listed, as well as publishers' addresses, are subject to change without notice. For latest information, please check with your local library.

The directories section is divided as follows:

1. International Directory of *Flying Saucer* Organizations
2. International Directory of *Flying Saucer* Periodicals
3. International Directory of Research Centers and Institutions Concerned with Astronautics and/or Space Research
4. A Partial List of Sightings, 1947-1967

The present work was compiled as an international record of written works on *Flying Saucers*, and on *Life on Other Planets*, twenty years after the first official sighting was reported. It is, however, important to note that the books, pamphlets, and articles listed in the latter bibliography cover the period from 1967 retrospectively to the seventeenth century. In the United States, some of the earliest writings regarding *Life on Other Planets* date from the 1880's. Effort was therefore expended to achieve as complete coverage as possible.

Because coverage was afforded to popular as well as scholarly materials, this sourcebook should be of interest to the intelligent layman, the high-school and college student, as well as to astronomers, exobiologists, religionists, and those in the social, biological and chemical sciences concerned with the topics. No technical works on the engineering aspects of space travel (astronautics) are included.

Although the effort has been made to include correct information, neither the compiler nor the publisher of this book guarantees the accuracy of statements, bibliographic entries, and addresses in, timeliness of, nor omissions from this book.

TABLE OF CONTENTS

Preface 3

SUBJECT INDEX TO BIBLIOGRAPHIES

(Although the majority of the books and periodical articles listed cover *UFO's* and *Life on Other Planets* respectively, some bibliographic entries deal with Astronomy, Extraterrestrial Beings, the Chemical Composition of Planets and their Atmospheres, Plant Life on Other Planets, Religion and Space Travel, as well as the individual planets themselves. Such items, under the foregoing headings, are listed in this index. For items about *Flying Saucers* and *Life on Other Planets* in general, please refer to the main bibliographies.)
